Professional Summary

Software Engineer with 5+ years of experience designing and developing scalable web applications and enterprise e-commerce platforms. Experienced in frontend architecture, performance optimization, reusable component systems, and large-scale digital products. Currently pursuing a Master of Science in Information Systems in the United States, with academic interests in Artificial Intelligence, Workflow Automation, Software Engineering, and Information Systems.

Technical Skills

Languages & Frameworks

JavaScript, TypeScript, React, HTML, CSS

Software Engineering

Frontend Architecture, Component-Based Design, System Scalability, Performance Optimization, Code Review, Software Quality

Artificial Intelligence

Generative AI, Prompt Engineering, AI-Assisted Development, Workflow Automation

Platforms & Tools

VTEX IO, Drupal, Laravel, Git, GitHub, Figma

Professional Experience

Jüssi

Mid-Level Frontend Developer

May 2021 – October 2024

- Developed and maintained large-scale e-commerce solutions for KitchenAid Brazil (Whirlpool Corporation) using React and VTEX IO.
- Contributed to frontend architecture standards, reusable component libraries, and engineering best practices.
- Participated in software quality, maintainability, and scalability initiatives.
- Improved website performance by 72% through frontend optimization and CSS architecture refactoring.
- Developed customized checkout and customer account experiences.
- Performed code reviews and collaborated with cross-functional teams.

Jüssi

Junior Frontend Developer

Apr 2019 – May 2021

- Developed and maintained digital platforms for major Brazilian organizations including Itaú, Honda, and Órigo.
- Built responsive interfaces and implemented new platform features.
- Participated in debugging, maintenance, and continuous improvement initiatives.

Jüssi

Web Development Intern

June 2018 – June 2019

- Developed and maintained digital platforms for major Brazilian organizations including Itaú, Honda, and Órigo.
- Built responsive interfaces and implemented new platform features.
- Participated in debugging, maintenance, and continuous improvement initiatives.

Selected Projects

KitchenAid Brazil Performance Optimization

KitchenAid Brazil | React, VTEX IO

- Led frontend optimization initiatives focused on CSS architecture, rendering performance, and maintainability.
- Refactored legacy styling structures, reduced unnecessary complexity, and improved code organization.
- Improved overall website performance by 72%, resulting in faster page loads and a better user experience across desktop and mobile devices.

Instagram-Inspired Content Experience

KitchenAid Brazil | React, VTEX IO

- Designed and developed an interactive mobile-first content experience inspired by social media story formats.
- Created a reusable component architecture that enabled marketing teams to showcase products, recipes, and branded content in an engaging format.
- The initiative was successfully adopted as a reference for similar content experiences across other Whirlpool Corporation brands.

Customized Checkout Experience

KitchenAid Brazil | React, VTEX IO

- Designed and developed a customized checkout solution extending native VTEX functionality.
- Improved purchasing workflows, usability, and flexibility throughout the checkout process.
- Contributed to a smoother customer experience, increased conversion performance, and reduced support-related issues.

FLPsicoFlow (Current Project)

Founder and Lead Developer

Developing an AI-powered workflow platform for healthcare professionals focused on documentation automation, productivity enhancement, workflow management, and intelligent information retrieval.

Education

Master's Degree in Information Systems (Ongoing)

Caroline University — California, United States

Postgraduate studies focusing on information systems, software engineering, digital transformation, data-driven decision making, and emerging technologies.

My current academic interests include artificial intelligence, workflow automation, intelligent productivity systems, and technology-driven operational efficiency.

Bachelor's Degree in Computer Science

Universidade Nove de Julho — Brazil

Complete training in software development, computer systems, algorithms, software engineering, databases, and information technology.

Technical Course in Computer Support and Maintenance

Instituto Federal de Goiás — Brazil

Technical training in computer systems, hardware maintenance, networking fundamentals, and information technology support.

Certifications

- Front-End Development — Alura
- Artificial Intelligence & Prompt Engineering — Alura

Languages

- Portuguese (Native)
- English (Professional Proficiency)
- Spanish (Basic)
